Education

University of Cyprus **Expected Graduation: Jun. 2027**

Bachelor of Computer Science | GPA: 8.18/10 *Nicosia, Cyprus*

- Relevant coursework: Data Structures, Algorithms, Operating Systems, Datacenter Computing, Databases, Mathematics

Work Experience

pozare **Sep. 2026 – Present**

Founding Engineer *Nicosia, Cyprus*

- Engineered Go/PostgreSQL services with Cloudflare object storage, presigned uploads, and asynchronous thumbnail and preview generation
- Built background image-processing workers, upload rate limiting, and event-specific workflows; deployed containerized services on Railway

Intergo Telecom **Jun. 2026 – Present**

Software Engineering Intern *Remote*

- Independently shipped **10 backend features** to production and completed **15 additional fixes and improvements** for a multi-tenant CPaaS platform using Java and Quarkus
- Built SIP trunk REST APIs and integrated Redis, MongoDB, and Kafka services with database migrations, transaction handling, validation, and unit tests

CYENS Centre of Excellence **Jun. 2025 – Sep. 2025**

Software Engineering Intern *Nicosia, Cyprus*

- Developed English/Greek AI storytelling workflows using OpenAI APIs, LangChain, and structured prompts for branching narratives
- Improved text-to-speech and image-generation pipelines, resolved **10+ defects**, and supported successful internal proof-of-concept testing

Open-Source Contributions

Meta / Pyrefly | PR #2143, PR #2149 Open Source | Jan.–Mar. 2026

- Fixed constructor-signature display and union-attribute suggestions in Meta's Python type checker; contributed tests and **merged both pull requests**

Projects

ForgeQueue | Source Code Go, PostgreSQL, Docker

- Built a concurrent PostgreSQL-backed job queue using atomic `FOR UPDATE SKIP LOCKED` claims; scaled processing throughput **9.4**× from 1 to 10 workers
- Implemented lease heartbeats, crash recovery, retries, and stale-worker protection; reduced job-claim query time **15**× (2.51 to 0.17 ms) via indexing
- Added Prometheus/Grafana observability and **64 Go tests**, including 18 database integration tests in CI with race detection

LLM Execution Across the Edge Continuum | Undergraduate Thesis Python, NVIDIA Jetson

- Extended a Python edge–cloud LLM simulator with availability- and latency-aware routing, network-delay modeling, and concurrency-slot queues
- Automated **339 simulation runs** across routing, placement, and hardware scenarios; validated Jetson AGX Orin energy predictions to **5.10% held-out** error

One-Stop Ride-Hail | Source Code T-SQL, SQL Server, Python

- Optimized transactional queries over 10,000+ rows using indexed T-SQL stored procedures; implemented server-side authorization in a three-person team

Technical Skills

Languages: Go, Java, Python, SQL, C
Backend & Data: Quarkus, FastAPI, REST APIs, PostgreSQL, MongoDB, Redis, Kafka
Infrastructure & Testing: Docker, Git, Linux, CI/CD, Prometheus, Grafana, k6, JUnit
