EDUCATION

University of Cyprus

Expected Graduation: Jun. 2027

Bachelor of Computer Science | GPA: 8.18/10

Nicosia, Cyprus

- Strong background in **Operating Systems**, **Data Structures**, **Algorithms**, **Databases**, and core **Mathematics**.

EXPERIENCE

Intergo Telecom

Jun. 2026 – Present

Software Engineering Intern

Remote

- Contributing to backend development for **SIP trunk management** features in a telecom/CPaaS platform, supporting customer workflows to create, view, filter, and manage trunks under tenant accounts.
- Helping implement **REST APIs** and validation logic in **Java** and **Quarkus** for SIP trunk creation, application-scoped behavior, DID assignment/unassignment, inbound routing rules, and external telecom integrations.
- Improving backend reliability by strengthening validation, permission-based access checks, error handling, and transactional safeguards across SIP trunk and DID management workflows.

CYENS Centre of Excellence

Jun. 2025 – Sep. 2025

Software Engineering Intern

Nicosia, Cyprus

- Developed features for an AI storytelling platform, improving generation consistency and multilingual logic across branching narratives using **LangChain** and custom **LLM** pipelines.
- Rebuilt media pipelines for TTS and image generation, increasing reliability to **100%**.
- Resolved **10+ critical defects** and redesigned navigation flows for deployment in a live school study.

OPEN SOURCE

Meta Platforms - Pyrefly

Jan. 2026 – Mar. 2026

Open Source Contributor

Remote

- Contributed to Meta's open-source Python type checker and language server **Pyrefly** in **Rust**, improving LSP behavior and type-checker diagnostics.
- Authored **2 merged PRs** for constructor signature display and union attribute suggestions, plus iterated on an additional LSP config-diagnostics PR through maintainer review.

PROJECTS

ForgeQueue | Source Code

Go, PostgreSQL, Docker

- Built a durable **PostgreSQL-backed job queue** in **Go**, supporting HTTP job submission, concurrent processing, retries, dead-letter jobs, lease-based recovery, and observability.
- Implemented safe concurrent job claiming using **FOR UPDATE SKIP LOCKED**, heartbeat-based lease renewal, and expired-job reclaiming to support reliable worker execution.
- Added **Prometheus/Grafana** monitoring and **k6** load tests, validating recovery behavior and processing a **10,000-job backlog** with peak throughput of **35.71 jobs/sec**.

Polyglot Meeting Assistant | Source Code

FastAPI, FAISS, Whisper, Python

- Built a **FastAPI/React** meeting assistant for uploading meeting content, generating summaries/action items, managing sessions, and performing semantic search over indexed results using **FAISS**.

One-Stop Ride-Hail (OSRH) | Source Code

T-SQL, SQL Server, Python

- Reduced query latency to **sub-second levels** on **10k+ rows** by architecting **indexed T-SQL stored procedures** and optimizing transactional database workloads.
- Hardened application security by implementing **HMAC-SHA256 password hashing** and enforcing **server-side authorization** to prevent privilege escalation.

TECHNICAL SKILLS

Languages: Go, Python, Java, SQL, C

Frameworks & Libraries: Spring Boot, Quarkus, FastAPI, LangChain, Streamlit

Databases & Storage: PostgreSQL, SQL Server, MySQL, Redis

Tools & Platforms: Git, Docker, Maven, Postman, JUnit, Linux

Backend & DevOps: RESTful API Design, Kafka Concepts, CI/CD Pipelines, Vercel
