EDUCATION

University of Cyprus

Expected Graduation: Jun. 2027

Bachelor of Computer Science | GPA: 8.18/10

Nicosia, Cyprus

- Strong background in **Operating Systems**, **Data Structures**, **Algorithms**, **Databases**, and core **Mathematics**.

EXPERIENCE

Meta Platforms - Pyrefly

Jan 2026 – March 2026

Open Source Contributor

Remote

- Contributed to Meta's open-source type checker **Pyrefly (Rust)**, focusing on type checking and LSP features.
- Authored **3 PRs** (**1 merged**, **1 imported**, **1 under review**) and collaborated with maintainers through CI and code review cycles.

CYENS Centre of Excellence

Jun 2025 - Sep 2025

AI Software Engineering Intern

Nicosia, Cyprus

- Led engineering for an AI storytelling platform, improving generation consistency and multilingual logic across branching narratives using **LangChain** and custom **LLM** pipelines.
- Rebuilt media pipelines (TTS + image generation), increasing reliability to **100%**.
- Resolved **10+ critical defects** and redesigned navigation flows for deployment in a live school study.

PROJECTS

Polyglot Meeting Assistant | Source Code

FastAPI, Whisper, FAISS, React, Python

- Built a **multilingual meeting assistant** supporting **semantic search over transcripts** by integrating **FAISS vector indexing** with an **asynchronous FastAPI** backend.
- Developed a **bilingual transcription pipeline** using **Whisper inference** with custom **language-aware post-processing** to improve readability and consistency across English and Greek audio.
- Designed a **scalable processing workflow** using **parallel audio chunking** and **batched embedding generation** to efficiently handle **long-form recordings**.

AI Finance Tracker | Source Code

Spring Boot, PostgreSQL, Java, React, JUnit

- Guaranteed **ACID-consistent financial transactions** by implementing **scalable storage abstractions** in Spring Boot and PostgreSQL, verified through rigorous integration testing.
- Increased ML categorization accuracy to **85%** across diverse spending patterns by deploying an **embedded ML pipeline** and performing iterative **feature selection** against labeled datasets.
- Designed a responsive user interface in **React** to visualize real-time spending analytics, integrating seamlessly with the Java-based backend REST API.

One-Stop Ride-Hail (OSRH) | Source Code

T-SQL, SQL Server, Flask, React, Python

- Reduced query latency to **sub-second levels** on 10k+ rows by architecting **indexed T-SQL stored procedures** and optimizing **transactional workloads**, verified via SQL Server profiling.
- Hardened application security by implementing **HMAC-SHA256 password hashing** and strictly enforcing **server-side authorization** to prevent privilege escalation and unauthorized URL access.

LEADERSHIP & COMPETITIONS

BoC Fintech Hackathon 6.0 - 3rd Place

Oct. 2025

Technical Team Lead (Team of 4)

Cyprus

- Led technical planning, delegated tasks and developed **HYLION**, a prototype platform enabling redistribution of surplus PV solar energy to households in need.

TECHNICAL SKILLS

Languages: Python, Java, SQL, C

Frameworks & Libraries: Spring Boot, FastAPI, Flask, React, LangChain, Streamlit

Databases & Storage: PostgreSQL, SQL Server, MySQL

Tools & Platforms: Git, Docker, Postman, JUnit, Supabase, Jira, Linux

Cloud & DevOps: CI/CD Pipelines, Vercel, Docker, RESTful API Design
